

Managely Release Notes

September 2024

Version 5.3.41.24

MANAGELY[®]

Application Corrections

Unsaved Changes Error on Closed Work Order When Navigating Away [00116247]

We fixed an issue with pages displaying the message “The current form has some unsaved changes. Are you sure you want to navigate away?” when it should not have after users would close or bill a work order.

Calendar Down [00120504, 120469]

We changed the logic that loads the calendar so that Managely only filters when there are employee IDs passed in. This reduces the size of the appointment IDs to be filtered to be only those for the selected employees, which improves performance and avoids unnecessary filtering when no employee filter is used.

Work Orders [00120472]

We resolved an issue where users could not view work orders in the open work orders tab.

Cannot access Reporting [00120520]

We fixed an issue where users could not run the balance sheet report.
