# Managely Release Notes

**September 2024**

**Version 5.3.41.24**

**MANAGELY®**

# Application Corrections

### Calendar Down [00120504, 120469]

We changed the logic that loads the calendar so that Managely only filters when there are employee IDs passed in. This reduces the size of the appointment IDs to be filtered to be only those for the selected employees, which improves performance and avoiding unnecessary filtering when no employee filter is used.

### Work Orders [00120472]

We resolved an issue where users could not view work orders in the open work orders tab.

### Cannot access Reporting [00120520]

We fixed an issue where users could not run the balance sheet report.
