

Managely Release Notes

January 2025

Version 5.3.43.33

MANAGELY[®]

Application Corrections

Created invoices not fully loading [00127818]

When processing RMR invoices, a user reported receiving an error saying 'rSalesTax cannot be tracked because another with the same key value is being tracked'. This was caused when a customer with multiple credits on their account, and the user tried processing the credits to go towards the generated invoice. We fixed this issue by removing any unnecessarily tracked records when applying credits to an invoice.
