

Managely Release Notes

June 2025

Version 5.3.51.10

MANAGELY[®]

Application Corrections

One Time Payment [00139346, 00139504]

Users tried processing a payment using the one-time payment feature, but the payment would not go through. The transaction was not logged due to an erroneous flag, which blocked the API call to update the transaction in the backend when accessing the transaction screen via invoices grid > Make a Payment.

We added a fallback error message when a payment fails to go through. Before this fix, when using the one-time payment feature the Submit Payment button could hang in a disabled state. Users can verify that the transaction was logged in Managely by navigating to the customer detail page and clicking the CC/eCheck tab and seeing the transaction in the grid. Before this fix, the grid would not list the latest transaction.
