

Managely Release Notes

February 2026

Version 5.3.62.7

MANAGELY®

Application Corrections

Proposals throwing a picture error [00152618]

We fixed an issue where proposals were giving an error when there should have been an image for the parts.

Incorrect “Generated from Work Order #” on Invoice Summary [00152922]

Invoices created from work orders showed an invalid “generated from work order #” in Managely. When creating an invoice from a work order, the field “generated from work order #” was incorrect and not valid in Managely.

We corrected this and changed WorkOrderId to WorkOrderNumber to show the correct work order number on the calendar. We also changed the workOrderId to WorkOrderNumber to create memo of the invoice

RMR Master invoices not generating correctly [00154207]

When printing RMR invoices for master customers where site RMR items have roll-up items, the printed invoice grouped all roll-up items across all sites in a single line under one site.

We fixed this issue. On the generated invoice PDF files, each site contains line items for the RMR items without roll-up codes and a single line item for each site for that site’s roll-up items combined. The roll-up line items amount is the sum of the amounts from the invoice details.
