

# Managely Release Notes

May 2026

Version 5.3.68.6

**MANAGELY**<sup>®</sup>

## **Application Corrections**

### **New User/Employee - unable to link user to employee [00161149, 00162049]**

A company with a new employee created a user account and an employee record but were unable to link the user and employee records.

The system was filtering out all valid users instead of filtering out those who were already linked to other employees. We fixed this. Administrators can now successfully link new user accounts to employee records, and the username dropdown properly displays all available users.

### **Managely proposal issues [00162224]**

When items or parts had quantity greater than 1, the sales price calculation was incorrect for particularly proposal header. When changing the Service Level dropdown multiple times, the Labor Units Override value was not being used in calculations, causing incorrect sales prices in the header. When changing the Proposal Type dropdown, if Labor Units Override had a value, calculations did not respect it.

We fixed each of these issues, so when users create a proposal and make multiple changes to it, Managely properly calculates the values on the proposal.
