

# Managely Release Notes

May 2026

Version 5.3.68.6

**MANAGELY**<sup>®</sup>

## **Application Corrections**

### **New User/Employee - unable to link user to employee [00161149, 00162049]**

A company with a new employee created a user account and an employee record but were unable to link the user and employee records.

The system was filtering out all valid users instead of filtering out those who were already linked to other employees. We fixed this. Administrators can now successfully link new user accounts to employee records, and the username dropdown properly displays all available users.
