

Work Order Status Overview

Last Modified on 04/27/2022 3:20 pm EDT

Work Order Statuses are used to track the progress of a Work Order. When a new Work Order is created, the system will automatically set the work order status to New. When the work order has been marked as completed, the work order status will automatically be updated to Completed. While a Work Order is in process, the user may manually change the Work Order Status.
