

PDF Preview for Template Designer and Send Form Preview Button

Last Modified on 01/08/2026 2:12 pm EST

When you click the Preview button on the template designer, form designer, or send forms screen, the PDF viewer displays the PDF file contents and includes a download button. On the completed form details, the button is labeled Preview.

Note: When using the preview to print a PDF file, if the PDF file has a non-standard size due to having a background PDF image (for example, 8.5 by 14 inches), the initial display of the print dialog may clip the content. To fix this, click **More Settings** to expand the menu and choose either **Fit to Paper** or **Fix to Print Area** in the **Scale** dropdown. If one of these options is already selected, then swap to the other one to make the change take effect.
